Keeping the Heat On

If your business has been adversely affected by the economic recession, you can probably understand the significance of keeping the heat on. Managing to keep moving forward has been challenging; however, it looks like there will be a greener spring.

During this winter, we have been keeping the heat on by providing engineering services for industrial clients and wrapping up a few education and healthcare projects.

Specifically, a local manufacturer and a trucking company both expanded their facilities; Bloomsburg University completed construction at Columbia Hall, we completed design of a senior housing facility and are near completion on a hotel upgrade in western PA. Design was completed on projects at the Altoona and Erie VA Medical Centers.

Not to forget Florida, we are near completion on a feasibility study for the University of Miami. Nice to have winter work in the Sunshine State.

During December, we actually secured a residential land development project. It was a pleasant surprise to see a Developer realizing an opportunity in the local residential building market.

Wherever your project may be located, whether it is in the industrial, education or healthcare market; call or email us and we will readily respond to your business plan and provide engineering services that result in a timely and economically feasible project. Thank you for your commitment to QproQ Engineering, Inc.
